D-AABQP-G11	Female	180416-DS	
D-AABQP-H11	Female	180416-DS	

The Phylos Plant Sex Test has been validated with thousands of samples from a large number of Cannabis strains. Cannabis is a highly diverse species and we cannot scientifically rule out the possibility that an unusual strain will cause an error. Errors can also occur due to mislabeling during collection, and females can turn hermaphroditic at any moment and release pollen. For these reasons, continue to be vigilant in watching your plants as they develop.

Please keep stakes with plants until harvest for quality control purposes. Samples are kept on file for 3 months and then destroyed.

Most male sex calls typically populate the results first, so you may see a higher ratio of males to females until all results are complete.
